<sup>1</sup> This laboratory offers commercial dimensional testing services only.

<sup>2</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine measurements of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific measurement performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific measurement.

<sup>3</sup> In the statement of CMC,  $L$  represents the numerical value of the nominal length of the device measured in inches.

<sup>4</sup> This test is not equivalent to that of a calibration.

<sup>5</sup> This scope meets A2LA's P112 Flexible Scope Policy.
